SKF is an international industrial Group operating in some 130 countries and is world leader in bearings.

The company was founded in 1907 following the invention of the self-aligning ball bearing by Sven Wingquist and, after only a few years, SKF began to expand all over the world. Today, SKF has some 45 000 employees and more than 80 manufacturing facilities spread throughout the world. An international sales network includes a large number of sales companies and some 7 000 distributors and retailers. Worldwide availability of SKF products is supported by a comprehensive technical advisory service.

The key to success has been a consistent emphasis on maintaining the highest quality of its products and services.

Continuous investment in research and development has also played a vital role, resulting in many examples of epoch-making innovations.

The business of the Group consists of bearings, seals, special steel and a comprehensive range of other high-tech industrial components. The experience gained in these various fields provides SKF with the essential knowledge and expertise required in order to provide the customers with the most advanced engineering products and efficient service.

SKF

SKF AquaMax

**Before we put
our name on them ...**

**... we put our
technology in them.**

- Save installation time with water pumps that fit perfectly – first time, every time.
- Keep your customers happy with performance that meets or exceeds all O.E. standards.
- Put an end to leaking pumps – the number one cause of premature water pump failure.
- Do the job just once instead of twice, and keep your profits high.

SKF

How to use the catalogue

This catalogue will help you to easily identify the water pump kit you need.

For one kit reference, in one package you will find the water pump and all the relevant accessories such as lock nuts, gaskets, o-rings...

Looking for the right kit

By using the index on page 11 you can easily find the right page in the catalogue in order to select the correct kit.

Manufacturers and models

Under this heading the name of the manufacturer and various models will appear. Supplementary information such as chassis number and exceptions are also shown.

Model year

As changes in engine design have arisen, the model year will help to select the right kit.

Water pump designation

The kit includes all the parts needed to change the water pump.

Engine type

Usual engine designations and numbers are displayed whenever needed.

Example ►

Looking for an Alfa 33 1.7, follow the left column until the model 33 is found.

After checking there is no restriction on engine type or model year, you will find the right designation of the VKPC kit.

Conversion list

◀ OE - reference VKPA or VKPC

You directly find the kit corresponding with the manufacturer's reference.

Contents of the kits

For one application, SKF proposes different types of kits :

The **VKPC** kit includes a complete water pump and its accessories.

The **VKPA** kit contains the water pump and other dismounted components - backhousing and/or pulley - and all their mounting accessories.

When the water pump is driven by a timing belt, the **VKMC** kit includes the complete water pump, the belt and the idler pulley whenever needed.

VKPA water pump kits include :
1 water pump + 1 backhousing + accessories

VKPC water pump kits contain :
1 water pump + accessories

VKMC timing belt kits include :
1 timing belt / 1 water pump / 0 or 1 idler pulley / mounting instructions

Belt tension testing device SKF TensiCheck

The improved SKF version possesses the following main characteristics :

- measurement of tension for both **timing** and **multi-V belts**,
- indication of **precise tension** of the belt,
- **confirmation** that **tension is correct** for the specific belt.

Notes

SKF AquaMax

The New Quality Standard for Replacement

Replacing a water pump is a time-consuming job – and one that service technicians don't want to do over again. So they know it makes sense to install the best replacement pump available in the aftermarket.

We agree. And so we set out to create a new generation of replacement water pumps so superior, they would set a new standard for the industry.

To accomplish this, we tapped into the vast R&D resources of SKF, using our unmatched expertise in bearings, metallurgy, friction, lubrication, sealing technology and hydraulics to create a family of water pumps that would outperform the competition in every important area – from leakage control to flow optimization. We even borrowed from our aerospace experience to make these pumps more corrosion-resistant than ever before.

With the new line of SKF AquaMax, leaks are a thing of the past. Now automotive professionals have a water pump they can sell and install with confidence. Consumers will enjoy optimum engine performance, and help protect our planet by producing fewer harmful emissions.

Superior design features – including an aerospace-inspired anti-corrosion coating.

Superior Materials

High quality bearings and case-hardened spindles provide high load capacity, including both axial and radial stresses. Unitized mechanical seals virtually eliminate premature leaks, the cause of 90 % of all water pump replacements.

Optimized Hydraulics

Impeller design and material selection assure maximum flow and pressure. A high-tech blue coating, used in the aerospace industry, minimizes problems with inferior coolants, preventing small particles of cooling liquid from sticking to the impeller for maximum corrosion resistance.

Precision Engineered

Unlike inferior rebuilt aftermarket pumps that can fail prematurely, SKF AquaMax are all new, and manufactured to meet or exceed all O.E. specifications. Precise manufacturing of all components assures proper fit, easier installation, and superior performance.

Superior performance and endurance, under every driving condition.

Superior Flow

Rigorous bench testing shows that at all speeds up to 1 000 r/min, flow exceeds performance in typical aftermarket water pumps. SKF AquaMax achieve superior hydraulic performance not only under normal driving conditions, but in stationary and high-speed traffic as well. Typical aftermarket brands fall far short of SKF flow standards.

Superior Sealing Technology

SKF AquaMax are subjected to rigorous testing to assure superior performance and endurance. When run for 1 000 hours at average car speeds of 100 km/h, vapor leakage is well below acceptable O.E. standards and far below that common with typical aftermarket replacement units.

User-friendly packaging with multi-lingual identification

Attractive new packaging helps reinforce the worldwide SKF brand. Multi-lingual identification aids in handling, and is a real convenience for service technicians.

Mounting instructions

Removal

- * Drain coolant and flush cooling system.
- * Clean the cooling system whenever needed.
- * Remove water pump (1) according to car manufacturer's instructions.

Before installing new water pump

- * Visually check for proper watertightness for the entire cooling system.
- * Replace crackling or spongy hoses (2) whenever needed.
- * Clean out the housing (3) where the water pump is to be fitted
- * Remove the old gasket / sealing ring, or sealant, and ensure the mounting faces are clean and free from damage.
- * Systematically check all the hose clamps (4) insuring watertightness of the cooling system.
- * Systematically change thermostat (5) and thermoswitch (6) to ensure a reliable repair.
- * Visually check the new water pump against the one to be replaced.

Installing new water pump

- * Install new water pump according to manufacturer's instructions.
- * Warning : where a silicone based sealant is used, observe the recommended curing times, before filling the cooling system.
- * Where a viscous fan coupling is fitted inspect the bearings for excessive wear, and follow car manufacturer's instructions.
- * Warning : fitting a worn viscous coupling to the new water pump, will result in premature failure of the water pump bearings due to the excessive vibration created.
- * Check that the water pump rotates freely without any blocking point.
- * Check the fanblades (where fitted) for distortion or missing or broken blades, which can cause out of balance forces, damaging the water pump bearings.
- * It is recommended that a new belt (timing belt or multi-V belt) and new tensioners are fitted when replacing the water pump to secure repair durability. For this purpose, SKF proposes VKMC kits containing a water pump, a belt and tensioners.
- * Tighten the belts with factory recommended tension.
- * To drain cooling system efficiently, set panel heater control to "HOT".
- * Fill system with recommended permanent coolant (see below the recommended characteristics for the cooling fluid).
- * When the engine has reached its operating temperature (fan running), check that the system is watertight.

⚠ Never refill while engine is hot, always wait at least an hour after engine is turned off. Cold fluid in hot engine can cause a thermal shock damaging the mechanical seal.

⚠ Never let the engine run without coolant, even during short periods . This could result in overheating of the mechanical seal and deteriorate it.

⚠ At the start up a limited leakage coming from the hole on the water pump body could occur. That phenomenon, linked to the mechanical seal running conditions, is normal and do not reflect any water pump problem.

Characteristics of the recommended cooling fluid

- * Made from an ethylene glycol base engine coolant concentrate and used at 40 to 70% concentration in water.
- * Characteristics of the glycol base :
 - freezing point -35°C minimum (50 vol % in distilled water),
 - boiling point 160°C. minimum,
 - boiling point 110°C minimum (50 vol % in distilled water).
- * Quality of the distilled water :
 - total solids 340 ppm maxi (ASTM D1888 test method),
 - total hardness 170 ppm maxi (ASTM D1126 test method),
 - chlorite 25 ppm maxi (ASTM D3634 test method),
 - sulfate 100 ppm maxi (ASTM D516 test method).
- * pH 50 vol % in distilled water between 7 and 8.
- * Including corrosion inhibitors and foam suppressor.
- * Reserve alkalinity 10 ml minimum.

NB : specifications following standards NF R 15-601 june 1991, BSI 6580 1992 and D3306 1994
